Art Unit: 1774

1. Claims 1-25, 30-32 and 40-41 are directed to an allowable product. Pursuant to the procedures set forth in the Official Gazette notice dated March 26, 1996 (1184 O.G. 86), claims 26-29 and 33-39, directed to the process of making or using the patentable product, previously withdrawn from consideration as a result of a restriction requirement, are now subject to being rejoined. Claims 26-29 and 33-39 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Since all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, the restriction requirement made in the Office action mailed on August 26, 2003 is hereby withdrawn.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Arthur E. Klugel on April 12, 2005.

The application has been amended as follows:

Claim 13: Delete the period following the phrase "substituted or unsubstituted 1,2-cylcohexylene group". Insert a period after the formula in the claim.

Claim 17: Delete the period following the phrase "represented by Formula II".

Art Unit: 1774

Claim 19: Delete the extraneous period following the term “polysiloxanes”.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance: The prior art does not provide for a transparent multilayer comprising a deformable first conductive layer containing an intrinsically conductive polymer, a film forming binder, and spacer elements embedded in and projecting from the surface of the first conductive layer, and a second conductive layer separated from the first conductive layer by the spacer elements to prevent contact between the conductive layers in the absence of external deformation.

Additionally, the prior art does not provide for a touch screen, comprising:

- a) a flexible transparent cover sheet bearing a first conductive layer;
 - b) a transparent substrate bearing a second conductive layer and located relative to the transparent substrate so that the first and second conductive layer face each other; and
 - c) spacer elements extending between the conductive layers to prevent contact in the absence of external deformation;
- wherein at least one of the first or second conductive layers comprises an intrinsically conductive polymer, a film forming binder, and spacer elements embedded in and projecting from the surface of the layer.

Also, the prior art does not provide for a method of making a touch screen display component of the type including a transparent substrate having a conductive layer, a flexible transparent cover

Art Unit: 1774

sheet bearing a conductive layer, and spacer elements extending between the substrate and the cover sheet, comprising the steps of:

- a) providing a liquid coating medium containing an intrinsically conductive polymer, a film forming binder and spacer elements;
- b) coating the liquid coating medium on the substrate or the cover sheet and drying to form at least one of the conductive layers,
- c) providing the other conductive layer on the other of the substrate or the cover sheet, and
- d) joining the substrate and cover sheet with their conductive layers facing each other and the spacer elements extending there-between.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
